## Avoid Bad Fats

Trans Fat (g) by Beverage

Trans fat is considered the worst type of fat to eat. Unlike other dietary fats, trans fats — also called trans-fatty acids — raise "bad" cholesterol and also lowers "good" cholesterol.

Trans fats are so unhealthy that the U.S. Food and Drug Administration (FDA) has prohibited food manufacturers from adding the major source of artificial trans fats to foods and beverages. Several countries and several cities in the United States have limited or banned the use of trans fats.
